

InsightAgent Report

Here is a thorough data analysis of the provided dataset.

1. Total Number of Records

* **Total Records:** 20 rows (representing individual book titles).

2. Price Analysis

All prices are denominated in British Pounds (£). Below is a summary of the statistical metrics derived from the price column:

Metric	Value	Book Title / Detail
Minimum Price	£13.99	Starving Hearts (Triangular Trade Trilogy, #1)
Maximum Price	£57.25	Our Band Could Be Your Life: Scenes from the American Indie Underground...
Price Range	£43.26	Spread between cheapest and most expensive
Total Combined Value	£760.97	Sum of all single-copy listing prices
Mean (Average) Price	£38.05	Total Sum / 20 items
Median Price	£41.38	Midpoint value between £37.59 and £45.17

Price Distribution Breakdown:

- * **Budget (< £25.00):** 7 items (35.0%)
- * **Mid-Range (£25.00 – £49.99):** 5 items (25.0%)
- * **Premium (≥ £50.00):** 8 items (40.0%)

3. Availability Analysis

- * **In Stock:** 20 items (100.0%)
- * **Out of Stock:** 0 items (0.0%)

Key Finding: There is zero variance in the availability column across this dataset. Every listed item is currently categorized as "In stock."

4. Interesting Insights

- Bimodal Price Distribution:**
Rather than following a standard bell curve, prices lean towards extremes. 75% of the inventory sits either in the low budget tier (< £25) or the premium tier (≥ £50), with relatively few titles priced in the middle £25–£49 range.
- Data Source Identification:**
This specific dataset corresponds to the first page of books on `books.toscrape.com`, a widely used benchmark website designed for web scraping and data parsing tutorials.
- Title Length vs. Price:**
There is no direct correlation between the length of a book's title and its retail price. For instance, the longest title ("The Coming Woman: A Novel Based on the Life of the Infamous Feminist, Victoria Woodhull") is among the cheapest items at £17.93, whereas short-titled books like

"Tipping the Velvet" are priced near the top at **£53.74**.

4. **Skewness:**

The median price (£41.38) is higher than the mean price (£38.05). This left-skew (negative skewness) occurs because 40% of the titles are clustered tightly in the £50–£58 range, pulling the median higher despite the presence of low-cost outliers down to £13.99.

5. Overall Summary

The dataset consists of **20 unique book records** extracted from a web scraping repository. The overall dataset has an average book price of **£38.05**, ranging from a low of **£13.99** to a high of **£57.25**. Inventory health appears optimal for this sample, as **100% of the listed products are in stock**. Retail pricing displays a bifurcated pattern, leaning heavily toward either high-end (£50+) or budget-friendly (<£25) books.
